

X. *A Monograph of the genus Acrida*, Stål (= *Truxalis*, Fabr.), with Notes of some allied genera, and descriptions of new species. By MALCOLM BURR, B.A., F.L.S., F.Z.S., etc.

[Read March 5th, 1902.]

THE following revision of the genus *Acrida*, Stål, better known as *Truxalis*, Fabr. (usually, and incorrectly, spelt *Tryxalis*), with the notes on certain allied genera, was written nearly eighteen months ago, when it was my intention to so revise the whole of the family *Truxalidae*. I do not, however, at present see my way to completing the work, and so publish now the results of a study of the genus *Acrida*, Stål, which badly needed recasting, together with descriptions of a few new species of other genera, and a revision of the genus *Gelastorhinus*, Br., which was previously ranged not in the *Truxalidae*, but in the *Acridiidae*; these were at the time taken in the stride in due course when studying the genera in order. I have, moreover, refrained from including notes upon the American genera, which have been well done by McNeill, Scudder, Brunner and others, especially as the latter author has been, and is still, occupied with these genera. Some of the African genera given in the synoptical table, are not otherwise referred to, for there is nothing as yet to add to the original descriptions of Karsch.

I have received help and assistance from various correspondents, but am especially grateful to Herr Hofrat Dr. C. Brunner von Wattenwyl, upon whose suggestion and kindly invitation, I originally went to Vienna to work at the *Truxalidae* of his extremely rich collection. All the wealth of this finest of collections of Orthoptera were placed freely at my disposal, and much help and advice I received from this most experienced and distinguished entomologist.

LITERATURE.

The following is a list of the chief works quoted. Smaller papers which are referred to, but not included in this list, may be found in the list of works quoted by

Dispositio Generum.

1. Caput ascendens. Pronotum postice plus minus timidum. *Acrida*, Stål.
- 1.1. Caput haud ascendens. Pronotum postice haud tumidum.
2. Prosternum tuberculo parvo instratum. (Lobi metasternales contigui; caput cylindricum.)

3. Caput pronoto longius.
 4. Foveolæ verticis angustæ. Elytra et alæ perfecte explicatae.
 Tibiae posticæ margine externo spinis 16 armatae *Achurum*, Sauss.
- 4.4. Foveolæ nullæ. Elytra rudimentaria; alæ nullæ. Tibiae posticæ spinis 25 armatae *Rhadinotatum*, McN.
- 3.3. Caput pronoto brevius, vel æque longum
 2.2. Prosternum muticum, tuberculo nullo.
 3. Caput conicum. Frons minus reclinata. Lobi metasternales haud contigui.
 4. Vertex oculo longior. Elytra ♂ longitudine pronoti latiora. Alæ ♂ latissime fenestratae *Hydropteryx*, Charp.
- 4.4. Vertex oculo brevior. Elytra ♂ longitudine pronoti angustiora. Alæ ♂ minus late fenestratae
 3.3. Caput subcylindricum, vel valde horizontaliter productum, haud conicum. Frons valde reclinata. Lobi metasternales contigni vel subcontigui.
 4. Caput pronoto longius.
 5. Statura gracillima. Alæ haud fasciatæ *Calamus*, Sauss.
- 5.5. Statura robustiori. Alæ nigrofasciatæ *Glyphoclonus*, Karsch.
- 4.4. Caput pronoto haud longius, sæpe brevius.
 5. Elytra valde abbreviata (antennæ serratae) *Odontomelus*, Bol.
 5.5. Elytra perfecte explicata.
 6. Alæ ♂ ♀ fenestratae . . .
 6.6. Alæ ♂ ♀ haud fenestratae.
 7. Statura majore. Lobi acuminati femorum posticorum exteriores quam interiores multo
- Gelastorrhinus*, Brunner.
- Trivalvis*, Fabr.
- Amphicremna*, Karsch.

- maiores. Antennæ
serratae *Oxyolena*, Karsch.
- 7.7. Statura minore. Lobi
acuminati femorum
posticorum interiores
majores. Antennæ
serratae.
8. Caput rugis longitudi-
nalibus instructum. *Amycus*, Stål.
- 8.8. Caput rugis nullis. . *Machæridia*, Stål.

ACRIDA, LINN.

Caput in conum ascendentem elongatum ; oculi oblongi, a margine antico pronoti longe remoti. Fastigium vertieis rotundatum, lateribus reflexis, cum fronte angulo valde acuto contiguum. Foveolæ verticis inferæ, angustissimæ, triangulares. Frons valde reclinata, ad ocellum medium subconstricta. Costa frontalis ad verticem acuta, inter antennas valde compressa, profunde sulcata, dehinc sensim oblitterata. Antennæ capite longiores, compressæ et basi dilatatae, ensiformes, segmento primo cylindrico, secundo parvo, aequo longo et lato, sequentibus valde compressis, triquetris, apicalibus 10 angustioribus, ultimo subcylindricis. Pronotum, a latere visum, concavum, postice triangulare (in *A. thrymmatoptera* exceptum, rotundato-truncatum), supra tricarinatum, carina media a sulco transverso unico interrupta, carinis lateralibus antice subparallelis, postice divergentibus, lobis deflexis rugis longitudinalibus interruptis instructis, angulo antico obtuso, postico acuto. Elytra angusta, acuminata, vena intercalata nulla. Alæ acuminatae, angustæ, area a furea rami radialis inclusa dilatata, venulis transversis verticalibus, aequo distantibus reticulata. Pedes graciles, postici longissimi, gracillimi. Femora postica vix incrassata. Segmentum abdominale primum utrinque fovea valde aperta instructum. Lamina suprana-
lis in utroque sexu triangularis, obtusa, in larvis utrinque sexus valde elongata, compressa, acuminata. Lamina subgenitalis ♂ in processum cucullatum producta.

(*Gryllus*) *Acrida*. Linn., 1758, S.N., ed. x, i, p. 427.

Truxalis. Fabr., 1775, Syst. Ent., 279 ; Serv. Charp.

Tryxalis. Brullé, 1835, Hist. Nat. Ins., IX, 216 ; Fisch.

Fr. Brunner et auctt.

Troxallis. Fisch. de W., 1846, Orth. Ross., p. 229.

Acrida. Stål, 1873, Rec. Orth., I, 95 ; Karsch, Bol., Sauss.

Stål was the first to restore Linnaeus' name, of undoubted priority, and although Brunner refuses to accept

the alteration, Stal is followed by Karsch, Bolivar and de Saussure.

It is a difficult genus, and Stal's work by no means clears the difficulty. Bolivar, however, has to a great extent elucidated it.

Dispositio Specierum.

1. Elytra in utroque sexu similia ; areis mediastina et scapulari opacis, irregulariter reticulatis, haud ampliatis. Carinæ laterales prozonæ rectæ, paralleæ. Ungues tarsorum breves, arolio iis æque longo, apice dilatato, magno.
2. Alæ lâte rubræ vel aurantiacæ.
3. Alæ fascia nigra ornatae.
 4. Vertex ante oculos acute delineatus : caput et thorax unicoloria : fascia nigra apicem alarum attingens.
 5. "Statura mediocri vel magna. Fastigium plus productum, acutius."
 - 5.5. "Statura minore. Fastigium minus productum, obtusius"
 - 4.4. Vertex ante oculos deplanatus : caput et pronotum nigropunctulata : fascia nigra marginem externam alarum liberans
 - 3.3. Alæ fascia nigra nulla.
 4. Alæ croceæ, apice hyalinæ . .
 - 4.4. Alæ aurantiacæ, nigro tessellata
 - 2.2. Alæ hyalinæ, vel infumatae, vel flavescentes, vel albidae.
 3. Alæ albidae
 - 3.3. Alæ hyalinæ.
 4. Alarum ramus venæ radialis prima haud incrassatus, aream angustam includens.
 5. Carinæ pronoti paralleæ.
1. *Brunneriana*, Bol.
2. *Sanguinea*, Sauss.
3. *Libertia*, sp. n.
4. *Crocea*, Bol.
5. *Ensis*, Burr.
6. *Intervalata*, sp. n.

- Femora antica pronoto
longiora 7. *Acuminata*, Stål.
- 5.5. Carinæ pronoti postice sensim
divergentes; femora antica
pronoto breviora.
6. Caput et pronotum fortiter
carinulata. 8. *Carinulata*, Bol.
6.6. Caput et pronotum lævia. . . .
10. *Rufescens*, Pal.
- 4.4. Alarum ramus venæ radialis
primæ incrassatus, aream
latam includens.
5. Vena incrassata alarum flex-
uosa, apice recurva, vena
ulnari contigua (alæ sul-
phureæ) 11. *Sulphuripennis*, Gerst.
5.5. Vena incrassata alarum sub-
recta, apice recurva, venam
ulnarem liberans.
6. Carinæ pronoti parallelæ . 12. *Stali*, Bol.
6.6. Carinæ pronoti postice
divergentes.
7. Alæ infumatæ. Species
asiaticæ.
8. Alæ hyalinæ, basi
nigro-tesselatæ. Fe-
mora antica prono-
tum longitudine
æquantia 13. *Lugubris*, sp. n.
8.8. Alæ hyalinæ, totæ
leviter infumatæ:
femora antica pro-
noto longiora 14. *Brericollis*, Bol.
7.7. Alæ flavescentes. Species
africanæ.
8. Alæ leviter flaves-
centes. Femora
antica pronotum
æquantia 15. *Subtilis*, sp. n.
8.8. Alæ hyalinæ, haud
coloratae: femora
antica pronoto long-
iora 16. *Propinquia*, sp. n.

- 1.1. Elytra in ♂ areis mediastina et scapulari ampliatis, hyalinis, venulis transversis regulariter dispositis, reticulatis. Carinæ laterales pro zona flexnosæ. Ungues tarsorum articulo tertio parum breviores, arolio compresso, brevissimo.
2. Statura maxima (♀ 92 mm.); alæ valde abbreviatæ. Fastigium verticis latum; pronotum postice rotundato-truncatum 17. *Thrymmatoptera*, [Karsch.]
- 2.2. Statura mediocri. Alæ haud abbreviatæ. Fastigium verticis angustius. Pronotum postice acutangulum.
3. Carinæ pronoti antice subrectæ. Pronotum postice acutangulum. 18. *Variabilis*, Klug.
- 3.3. Carinæ pronoti valde flexnosæ. Pronotum postice in spinam acutam productum.
4. Alæ fusco-fasciatæ 19. *Fusco-fasciata*, Bol.
- 4.4. Alæ haud fasciatæ.
5. Alæ basi flavescentes, hyaline. Antennæ marginibus integris 20. *Serrata*, Thunb.
- 5.5. Alæ sanguineæ, nigro-tessellatae. Antennæ marginibus serratis 21. *Somalia*, sp. n.

1. *Acrida brunneriana* (Bol.).

Viridis, fusco- vel rufo-variegata. Statura gracili: mas feminâ duplo minor. Antennæ ensiformes, elongatæ, ♂ capite et pronoto unitis longiores, lateribus serratis. Caput angustum, vix elevatum; vertex ante oculos acute delineatum, fastigium lateribus vix reflexis, vix concavum. Pronotum cylindricum, carinis lateralibus subrectis, postice subundatis, margine postico acutangulo: lobi deflexi carina superiori recta: pronotum postice sub-dilatatum. Caput et pronotum viridia, fusco- vel testaceo-variegata, linea albida ab oculis per genas lobosque deflexos perductâ ornata: carinæ nigro-ornatæ. Elytra angustissima, viridia, fusco-variegata, areis mediastina et scapulari haud dilatatis. Alæ basi albidæ, vel flavescentes, medio læte rubro, extus fascia lata nigra apicem ipsum liberanti, margine

exteriori maculis nonnullis albidis, ornatae. Femora antica pronoto longiora: ♂ ♀.

	♂	♀

Putria. CENTRAL MADAGASCAR (Bol., Coll. Brunner, No. 13,823); Tananarive (Coll. Brunner, No. 17,874).

Truxalis brunneriana. Bol., 1893, Det. Gen. Tryx., 1 and 3.

Acrida radamae. Sauss., 1899, Senck. Nat. Ges., xxi, 629, pl. xxxviii, figs. 29, 30.

Bolivar gives a very brief description of the species, under the name received from de Saussure. The specimens in the Brunner collection are named "*brunneriana*," but there can be no doubt that de Saussure changed his name on publishing the description. In the meantime Bolivar had gained priority and his name must stand. The specimens in the Brunner collection named "*brunneriana*" by de Saussure agree perfectly with the latter's description, and there is no doubt as to the correctness of the synonymy.

It varies considerably in size and intensity of colour. The male is very markedly smaller than the female.

2. *Acrida sanguinea*, Sauss.

Quam *A. brunneriana* minor. "Caput minus elongatum; ejus processus a latere minus angustus, multo minus elongatus, vetricisque rostro breviore. Pronotum illo *A. turritae* (*T. nasutae*) sat simile, carinis dorsalibus lateralibus in metazona divergentibus. Elytra et alae angustissima, acutissima. Color viridis, subtus pallidus. Caput subtus lutescens, utrinque inter carinas laterales vitta lutea vel rubescente ab oculis emissis ornatum, necnon superne utrinque vittam alteram albidae ab oculo inter carinas supernas ad apicem pronoti praebens. Margo inferior loborum lateralium anguste albo-limbatus. Elytra longissima, viridia. Alae et ad basin sanguineae; campi antici apice leviter decolore vel virescente; margine externo campi postici per vittam fuscam limbato; vitta antice latiuscula, postice valde angustata.

Var. *a*. Caput et pronotum vitta dorsali longitudinali lutea. Var.

b. in desiccatis nonnunquam alae decolores flavicantes, vel tantum anterius sanguineæ. ♀ long. corp. 53; caput supra 13; pronoti. 7; elytr. 54; fem. post. 33 m.

Acrida sanguinea. Sauss., 1899, Senck. Nat. Ges., xxi, 629.

Patria. Antananarivo in MADAGASCAR (Sauss.).

I only know this species from de Saussure's description. It appears to be very closely allied to *A. brunneriana*.

3. *Acrida liberta*, sp. n. ♂

Viridis; statura majore. Caput, pronotum, sternum et pleura nigro-punctulata. Vertex latus, deplanatus, haud acute delineatus, lateribus valde reflexis. Antennæ valde deplanatæ, longæ. Pronotum postice haud dilatum, carinis lateralibus parallelis, rectis; disco medio puncto nigro utrinque ornatum: lobi deflexi carinulis irregularibus instructi. Elytra longa, angusta, valde acuminata. Alae elytris breviores, rubræ, apice hyalinæ, nigrofasciatæ; fascia nigra marginem posticum alarum includens, apicem liberans. ♀.

♀

Patria. SLAVE COAST, Hô (Coll. Brunner, No. 17, 438).

This species differs from *A. brunneriana* in the form of the vertex and the alar fascia, which is curved inwards towards the apex, leaving the apex of the wing clear. From *A. crocea*, it may be easily distinguished by the presence of the black band.

4. *Acrida crocea* (Bol.).

Viridis vel rufa. Vertex ante oculos deplanatus, haud acute delineatus. Fastigium verticis antrorsum ampliatum, latissimum, supra concavum, marginibus reflexis. Antennæ valde ensiformes, deplanatæ, ♂ dimidio basali latiores, dimidio apicali angustatæ, ♀ in tertia parte apicali tantum angustatæ. Pronotum angustum, nec dilatum nec elevatum, carinis lateralibus parallelis, postice acutangulum; lobi deflexi carinâ superiori subsinuatæ. Elytra

valde acuminata, opaca, viridia vel rufescens, areis mediastina et scapulari in utroque sexu opacis, haud dilatatis. Vena radialis postica in medio elytri furcata. Alae elytris breviores, laete croceae, maculis nonnullis pallidioribus ornatae, apice tantum hyalinae vel flavescentes. Femora antica pronoti longiora : femora postica elytris breviora : ungues tarsorum breves, arolio elongato. Lamina subgenitatis ♀ acuminata. ♂ ♀.

Truxalis crocea. Bol., 1889, Ort. Mus., Lisbon, p. 91.
Bol., 1893, Det. Gen. Tryxalis, pp. 1 and 3.

Patria. ANGOLA, Duc de Bragança; Ambriz (*Bol.*); PORT NATAL, Duc de Bragança; TRANSVAAL (Coll. Brunner, Nos. 2304, 15,398).

The specimens in the Brunner collection are somewhat smaller than the type of Bolivar.

It may be distinguished by the colour of the wings : it falls obviously into the first division of the genus, and is not likely to be confused with its allies.

The cell on the pronotum is sometimes present, and sometimes obsolete.

5. *Acrida ensis* (Burr).

Viridis. Corpus elongatissimum, cylindricum. Caput minus ascendens ; antennae longae, deplanatae, segmentis apicalibus minoribus, capite pronotoque unitis longiores. Pronotum parvum, cylindricum, nec constrictum nec postice dilatatum : carinae laterales subflexuosa, postice paulo divergentes ; sulcus typicus valde pone medium situs, sinuatus ; lobi laterales pronoti antice obtuse-angulati, haud rotundati, carinis cum carinis dorso-lateralibus pronoti pene parallelis. Sternum medio valde carinatum. Elytra longissima, acuminata viridia, area scapulari venulis transversis obliquis sat remotis venuisque spuria instructa. Alae pulcherrimae, longae, angustae, elytris valde breviores, aurantiacae, nigro-tesselatae, apice flavidohyalinae. Abdomen typicum. Pedes longissimi, gracillimi ; tarsorum unguis longi ; pulvilli magno. ♀.

(?) *Tryxalis nasuta*. Burr, 1898, P.Z.S., 284 (larvæ).

Truvalis ensis. Burr, 1899, Bull. Mus., Liverp., ii, 43.

Patria. SOKOTRA (B. M. Mus., Liverp.).

This is one of the two most elongated and slender members of the genus: it should be noticed that the antennæ exceed the combined length of the head and pronotum; the golden-orange wings, tessellated with black, are very striking.

6. *Acerida intercalata*, sp. n.

Statura minore. Testacea. Vertex latus, deplanatus, haud aente delineatus, lateribus paullo reflexis. Pronotum postice haud dilatum, carinis lateralibus parallelis; lobi deflexi angulo postico acuto. Elytra testacea, angusta, valde acuminata. Alæ angustæ, totæ albidae. Pectus carinatum. ♀.

	♀
Long. corp.	48 m.m.

Bol., 1881, Ins. Angola Mus. Lisb., 10.

Tryxalis acuminata. Bol., 1893, Det. Gen. Tryx., 1-3.

Bol., 1893, Ann. Soc. Ent. Fr., 174.

Patria. CAFFRARIA (Stål, Mus. Holm.); GABOON (Coll. Brunner, No. 13,261); PORT NATAL, near Ladysmith (Coll. Brunner, No. 16,729); BATHURST, Assinie (Bol.).

The extremely pointed elytra, the yellow wings, radiated with brown at the extremity, the thickset, flattened head and pronotum, distinguish this species.

8. *Acrida carinulata* (Bol.).

" Pallide rufescens (verisimiliter decolorata). Fastigium verticis concavum, marginibus reflexis. Caput supra subtusque longitrorsum carinulatum, inter carinas rugoso-granosum. Antennæ modice ampliatæ. Pronotum granulosum, pone sulcum posticum parum ampliatum, carinis punctato-impressis, ante sulcum rectis, parallelis; pone sulcum lœvissime curvatis, valde distantibus; sulco pone medium sito; margine postico obtuse angulato; carina media acute producta; lobis deflexis retrorsum modice ampliatis, margine externo valde incrassato, fere recto, intus carina longitudinali cum carina marginali dorsi parallela, in prozona fere obliteratae. Elytra angusta, longissima, valde acuminata vena radiali tertia ante medium elytri furcata, deinde haud ramosa; vena intercalari basi apiceque obliterata. Alæ hyalinæ, angustæ, acuminatae; ramo primo venæ radialis ante medium furcate. Pectus haud carinatum. Femora antica pronoto breviora; postica angulis apicalibus dorsalibus modice productis; arolio magno. ♀.

Esta especie pertenece á la primera division de Stål y debe figurar al lado del *Tr. acuminata*, Stål, de la que se distingue por la forma

relativamente mas prolongada y estrecha del pronoto y por la escultura de este y de la cabeza, esta última presenta numerosas quillas longitudinales no todos igualmente elevadas, distinguiéndose ademas de la central otras dos á cada lado que parten del ojo y se continuan con la quilla lateral del pronoto y con el borde inferior lateral respectivamente ; entre estas quillas hay otras menos elevadas y mas irregulares, como formadas por granos dispuestos en series frecuentemente interrumpidas. El pronoto tambien esta cubierto de granos que sobre la metazona forman lineas longitudinales. Los élitros son muy largos y estrechos terminando en punta aguda ; la tercera vena radial se divide en dos antes del medio, casi el mismo nivel que la ulnaria anterior, continuando los ramos de la primera sin nueva division mientras que el ramo anterior de la ulnaria se bifurca una vez : la vena intercalada desaparece cerca de la base y tambien en el extremo del area que recorre, que es abierta. Las alas son hialinas, agudas, estrechas y una quinta parte mas cortas que los élitros. Las patas posteriores son muy largas y delgadas."

Tryxalis carinulata. Bol., 1890, Orth. Afr. Mus., Lisboa, i, p. 90.

Tryxalis carinulata. Bol., 1893, Det. Gen. Tryx., 2 and 3.

Patria. CAPE VERD ISLANDS (*Bol.*).

I do not know this species and so merely quote Bolivar's description and remarks.

9. *Acerida nasuta*, Linn.

Viridis unicolor, vel roseo- et fuscovittata, vel testacea. Elytra interdum in area discoidali serie vittarum albidarum, venam intercalatam simulante, ornata. Fastigium verticis supra concavum, haud acute delineatum. Antennae usque ad apicem depressae. Pronotum disco pone sulcum transversum vix dilatato, sensim elevato. Elytra areis mediastina et scapulari in utroque sexu opacis, venulis irregularibus obsitis, area anali angusta. Alae hyalinæ, viriscentes, venis principalibus rufescensibus, in varietate testacea apice fusco-circundatis. Femora antici pronoto breviora. Lamina subgenitalis ♂ lanceolato-acuminata, margine superiore sinuata.

Putria. In EUROPE: All Southern Europe, very common. The most northerly points of its distribution appear to be Budapest, the southern slopes of the Alps, and the south of France, Marseilles, Montpellier (Coll. Br.), the whole of the Balkans, and South Hungary (common), Italy, Sicily. In AFRICA: Algeria, Tunis, Egypt Senegal, Sierra Leone, Cameroons, Gaboon, South Africa, Natal, Cape Colony, Madagascar. In ASIA: Asia Minor, Syria, Turkestan, Himalaya, China, Hong-Kong, Hainan, Japan, Cambodia, Cochin China, Malaccas, Singapore, Celebes, Sumatra, Bangkok, Java, Borneo, Philippines. In AUSTRALIA: Rockhampton, Queensland, Sydney, Moreton Bay, Lord Howe's Island, Port Adelaide, Victoria, New Holland.

10. *Aerida rufescens* (Pal.).

"*Truxale* roussâtre. Antennes, tête, elytres variés ou rayés de brun. Abdomen et pieds roussâtres. (Fig. 2.)

"*Truxalis rufescens*. Antennis, capite, clytrisque fusco-variegatis. Abdomen pedesque rufescentes. (Fig. 2.)

"Aux mêmes lieux que la précédente (*nasutus*, i.e. Chama, Oware and Benin), sur le bord des eaux.

"*Obs.* Rigoureusement parlant, cette espèce ne diffère de la verte (i.e. *nasutus* Fabr. et Linn.) que par sa couleur ; cependant, toutes proportions gardées, les antennes sont plus longues, et les sept ou huit derniers articles sont cylindriques, et cessent d'être plats et triangulaires comme les inférieurs. J'en possède deux variétés : une dont les elytres sont marquées latéralement d'une large raie brune, tâchetées de blanchâtre et dans laquelle se trouve une nervure brune, interrompue alternativement de taches longues et blanchâtres : ce qui semblerait la rapprocher de la *Truxalis conique*, *Truxalis conicus*, Fab. L'autre a les elytres entièrement rousses, d'une couleur plus pâle, uniforme et comme mouchetées de taches brunes, mais peu apparentes."

Truxalis rufescens. Pal., 1805, Ins. Afr. Amér. Orth., pl. 2, p. 17, fig. 2.

Acerida rufescens. Stål, 1873, Rec. Orth., i, p. 97.

Truxalis nebulosus, var. *d.* Thunb., 1815, Mém. Ac. Pet., v, p. 267 ; id. 1827, Nov. Act. Ups., ix, p. 83.

Tryxalis rufescens. Bol., Jorn. Sci. Math. Phys. e Nat., Lisboa (2), i, p. 92, 1890.

This remains a doubtful species ; if it really deserves specific rank, it must fall near to *Acerida nasuta*, L., but I am unable to differentiate in the synoptical table. Bolivar (l. c.) appears also in doubt.

I have given above Palisot de Beauvois' remarks in detail. Bolivar refers, with some hesitation, to this species some large specimens from Duque de Bragança.

Stål remarks that it is very similar to *A. turrita*, but larger. In all probability it is merely a synonym of the type species.

11. *Acerida sulphuripennis* (Gerst.).

Viridis vel testacea. Mas feminâ duplo minor. Caput magis elevatum. Fastigium angustum, concavum. Antennae haud valde deplanatae, capite et pronoto unitis breviores. Pronotum subconstrictum postice subdilatatum, carinis lateralibus subsinuatis ; lobi deflexi angulo postico minus acuminato. Elytra viridia, vel testacea, fusco-variegata. Alae flavae, latiores, haud valde acuminatae, area

dilatata valde perspicua, apice infuscatae. Abdomen sordide flavidum vel fuscum. Lamina subgenitalis ♂ fornicata, bituberculata. ♂ ♀.

	♂	♀

" fem. post.	18	30·5

Patria. CAPE COLONY (Coll. Brunner, No. 16,698) SLAVE COAST, Hó (Coll. Brunner, No. 17,437).

This species scarcely differs from *A. lugubris*, m., and I can find no points of distinction other than given above.

17. *Acrida thrymmatoptera*, Karsch.

" Grün, Hinterleibsrücken licht roth, Bauchseite gelb. Auf den

Hinterflügel einige Queradern dunkel gesäumt. Durch die Deckflügel zieht ein vorn gabliger, dann schmäler und vom Innenrande entfernter, im hinteren Viertel breiter und dem Innenrande sehr nahe verlaufender dunkler Längsstreifen. Oberrand der oberen, Unterrand der unteren Scheidentheile schwarz.

"Scheitel nur wenig länger als der Pronotum-rücken, nach vorn nur ein wenig verschmälert, Scheitelgipfel länger als breit, gleich breit, vorn stumpf, mit gerundeten Winkeln. Fühler sehr breit, wenig schmäler als der Scheitelgipfel. Pronotum-rücken fast gleich breit in seiner ganzen Länge: Basaltheil halb so lang wie der Apicaltheil, flach, nicht ansteigend, auf der Mitte des Hinterrandes spitzwinkelig, die Seitenkiele des Pronotum-rückens ihrer ganzen Länge nach parallel. Krallen mässig lang, Arolium gross, länger als die Krallen. Deckflügel wohl ausgebildet, die Mitte der Hinterschienen ziemlich erreichend. Hinterflügel ausserordentlich kurz, die Mittelschenkel kaum überragend, schmal, am Ende spitz, ♀."

♀

Acrida thrymmatoptera. Karsch, 1893, Berl. Ent. Zeit., xxxviii, p. 55, fig. 1, ♀.

Patria. W. AFRICA: Bismarckburg, Nov. 1-Dec. 15, 1890 (Karsch).

I only know this species from Karsch's description and figure; its large size and extremely abbreviated wings should distinguish it from the others of the genus. In the shortness of the wings it approaches *Calamus*, Sauss.

18. *Acrida variabilis* (Klug.).

Viridis, vel testacea, fusco-variegata. Fastigium verticis haud acute delineatum. Antennæ dimidio basali tantum deplanatae, deince attenuatae. Pronotum carinis lateralibus antice subrectis, postice divergentibus, postice dilatatum, lobis lateralibus angulo postico recto. Elytra area marginali in parti apicali arearum medianæ et scapularis ♂ hyalina, venulis transversis obliquis, regula-

riter dispositis. Alæ hyalinæ, fusco-tesselatae, interdum flavescentes, præcipue in ♀ basi violaceæ al. roseæ. Femora antica pronoti longiora. Ungues tarsorum fortiores, articulo primo breviores, arolio minimo, compresso. Abdomen apice fusco-vittatum. Lamina subgenitalis ♂ breviter acuminata, a latere visa margine postico subtruncato, margine superiori recto. ♂ ♀.

Patria. In EUROPE: the Mediterranean Coast; Andalusia, Sicily, Candia, Corfu (*Bol.*, *Br.*). In AFRICA: Algeria, Egypt (*Finot*), Senegal, Angola, Cape Verd (*Bol.*), Morocco (*Bol.*), Mombassa (*Gerst.*), Somali (*Schult.*). In ASIA: Syria, Jaffa (Coll. m.), Asia Minor, Cyprus, Seir in N.W. Persia (*Burr*), Angora (*Bol.*), Aden (*Schult.*). Var. *variabilis*: Egypt (*Klug.*, *Br.*), Assouan, Khartoum, Nubia. Ladakia, Ceylon; India; Moluccas (Coll. Brunner, Nos. 9102, 9103, 15,694, 15,870, 16,669, 2852, 5038).

Several authors have endeavoured to separate *A. miniata*, Klug. (= *variabilis*, Klug.), *A. pharaonis* and *A. unguiculata*, Ramb., into separate species. Finot (Orth. Alg. Tun.) gives *miniata* and *unguiculata* distinctions in a synoptical table, as well as long descriptions. The only point of distinction which I am able to find consists in the colouring of the wings, especially in the ♂, but this is far too weak a character to suffice. The difference is rather one of degree than of kind, and cannot be made to bear the strain of supporting a species. Finot remarks, however, that although *A. miniata* is found in the same localities as *A. unguiculata*, it reaches the imago stage several months later. For *A. miniata* he gives October, for *A. unguiculata* he gives May to September; larvae, May to November (in Algeria).

The form *miniata* with crimson wings (♂) occurs in Egypt and Tunis, but has not yet been taken in Europe.

19. *Aerida fusco-fasciata* (*Bol.*).

"Testacea, fusco-fasciata. Fastigium vertieis antrorum distincte angustatum, marginibus plus minusve reflexis; antennae angustae. Pronotum dorso pone sulcum posticum elevatum sed parum ampliatum, carinis lateralibus ante sulcum valde flexuoso-angulatis, dein flexuosis sed vix divergentibus, intus fusco-fasciatis, sulco postico ante medium sito; postice acutissime productum; metazona indistincte carinata; lobis deflexis sulco medio profunde impresso, carina interna carinisque marginalibus dorsi antrorum valde divergentibus. Elytra apice obtuse acuminata, areis mediastina et scapulari in utroque sexu aequa dilatatis, opacis, reticulatis; campo disoidali fascia fusca antice pluriundata ornato: furca ulnari longe pone medium sita. Alae hyalinæ, fascia lata media fusca ornatae venæ radialis postica pone medium furcata. Pectus haud carinatum;

femora antica pronoto sub-breviora : femora postica elongata, supra apice bispinosa. Ungues articulo tertio parum breviores, arolio parvo. Lamina subgenitalis ♂ brevissima.

	♂	♀
Long. corporis . . .	33 m.m.	48 m.m.
" antenn. . . .	16	19
" pronoti	6	8·5
" elytrorum	31	41
" fem. ant. . . .	6	7·5
" fem. post. . . .	21	29

“Semejante al *Tr. serrata*, Thunb., del que á primera vista se distingue por la coloracion de las alas que ofrecen una ancha faja parda dispuesta como en el genero *Pyrgodera*, y ademas por las diferencias siguientes.

“Las antenas son mas estrechas y las quillas laterales del pronoto mas fuertemente sinuosas en su primera mitad y poco mas separadas entre si en la metazona; esta segunda mitad del pronoto aun cuando provista de arrugas longitudinales no aparece tan distintamente estriada como en el *Tr. serrata*, Th.: los lóbulos laterales tienen el borde inferior mas sinuoso y el surco medio profundamente impresio. Los élitros son de igual formas en ambos sexos, con las areas medias-tina y escapular completamente reticuladas y opacas; el campo discoidal ofrece como en el *Tr. serrata*, Th., una faja longitudinal parda, ondeada por delante, pero en la nueva especie las ondas son mucho mas menudas y numerosas. Las alas son de igual forma que en la especie citada y finalmente las patas son delgadas, los fémures posteriores terminan por encima en dos largas espinas y los lóbulos geniculares tambien son espinosos, las uñas del ultimo artejo de los tarsos son apenas mas cortas que este y el arolio es muy pequeno. La placa infra-anal del ♂ es muy corta.”

Tryxalis fusco-fusciata. Bol., 1890, Ort. Afr. Mus., Lisb., i, 93.

Tryxalis (Aeridella) fusco-fasciata. Bol., 1889, Det. Gen. Tryx., 3 and 4.

Patria. Quando in ANGOLA (Bol.).

Apparently a very distinct species, but I only know it from the description.

20. *Aerida serrata* (Thunb.).

Statuta minore, robusta: viridis vel testacea, fusco-variegata. Vertex haud acute delineatus. Antennae capite et pronoto unitis longiores, deplanatae, marginibus integris. Caput breve, fastigium

verticis oculis brevius, haud acute delineatum, lateralibus valde reflexis. Pronotum breve; disci pars antica parte postica multo brevior: pronotum medio constrictum, carinis lateralibus valde flexuosis; margine postico in spinam producto; lobi lateralis carina superiori cum carinis dorsalibus haud parallelæ, angulo postico rotundato-recto. Elytra latiora, maculis albidis seriatim ornata. Alæ hyalinæ, basi flavescentes, apice infumatæ. Valvulae ovipositoris breves. ♀.

* It should be noticed that it is not the *lateral* genicular lobes, but the superior one, that is produced into a spine.

Calamus linearis. Sauss., 1861, Ann. Soc. Ent. Fr. (4), p. 476, pl. ii, fig. 3.

Karsch, 1893, Ins. von Adeli, 56, fig. 3 (excl. syn. Bol.).

Griffini, 1897, Boll. Mus. Tor., No. 290, p. 6 (excl. syn.).

(?) *Mesops gracilis.* Burn., 1839, Handb. ii, 610.

Patria. ? (Sauss.) ; Bismarckburg (Karsch) ; Bogos (Coll. Brunner, No. 12,768) ; Kazungula on the UPPER ZAMBESI (Griffini) ; Hó on the SLAVE COAST (Coll. Brunner, No. 17,436).

Bolivar (Ort. Afr. Mus., Lisb., i, 1889, p. 94) wrongly regards this species as synonymous with *Amycus xanthopterus*, as Karsch rightly points out, and he misquotes Bolivar's *rhodopterus* ; but I fail to see why the latter assumes that Bolivar's species should be *C. linearis*, and that his determination is wrong. I prefer to merely regard Bolivar's synonymy as faulty.

De Saussure's figure is incorrect in omitting the prominent genicular spines, and Karsch's drawing shows the position of the eyes inaccurately. Griffini considers Karsch's insect as an entirely different species, but it appears to me that it entirely agrees with *C. linearis*, Sauss. ; the Italian author bases his opinion on Karsch's drawing, especially on the position of the eyes ; the specimen in the Brunner collection agrees equally well with the *C. linearis* of de Saussure and of Karsch. I prefer to disagree with Griffini, in regarding Karsch's determination as correct.

33. *Amycus*, Stål.

Statura minori. Caput pronoto haud longius, antice rotundatum. Antennæ breves, basi deplanatae, apice cylindricæ, segmento apicale composito. Caput et pronotum supra tota rugis longitudinalibus instructa. Pronotum compressum, margine antico truncato, postico acutangulo : lobi laterales margine antico obliquo, infero recto, postico sinuato. Elytra angusta ; alæ elytris breviores. Pedes breves ; femora postica abdomen paullo superantia, elytrorum apicem haud attingentia, lobis genicularibus lateralibus acuminatis, superioribus in lobos obtusos productis. Tibiæ posticæ spinis parvis 8 armatis.

Amycus. Stål, 1855, Ö. V. A. F., 353.

Stål, B., 1873 : Rec. Orth., i, 89.

Karsch, 1893, Orth. Adeli, 59.

Brunner, 1893, Rév. Orth., 118.

Typus generis. Amycus xanthopterus, Stål.

Dispositio specierum.

1. Antennæ margine externo serratæ. Alæ coloratæ.

1. *Xanthopterus, Stål.*

1.1. Antennæ margine externo integræ. Alæ vitrinæ.

2. *Achromopterus, Karsch.*

34. *Amycus xanthopterus, Stål.*

Fusco-testaceus, neenon pallido-variegatus ; elytris apice, genibusque infuscatis. Alæ hyalinae, aurantiaco- vel roseo-inflatae : antennæ parte basali segmentis deplanatis, margine externo angulo apicali indentem productis, segmentis apicalibus cylindricis.

Amycus xanthopterus. Stål, 1855, Ö. V. A. F., 353; ibid., 1873; Rec. Orth., i, 100.

Bol., 1889, Orth. Afr. Mus., Lisb., i, 94 (excl. syn.).

Amycus rhodiopterus. Stål, 1855, Ö. V. A. F., 353; ibid., 1892, Rec. Orth., i, 100.

Karsch, 1893, Orth. von Adeli, 59.

Patria. CAFFRARIA (Stål); Duque du Bragança, Caconda and Cabinda in ANGOLA (Bol.); Bismarekburg (Karsch); Port Natal (Mus. Berl. teste Karsch, l. c.); NATAL (Coll. Brunner, Nos. 2305 and 6739), Weener in Natal (Coll. mea).

I have little hesitation in uniting the two forms, with yellow and red wings respectively, into one species, as has been suggested by Karsch. I do not agree however with the latter in regarding *Macharidia tenuiata*, Bol., as synonymous, owing to its "elytra viridia."

35. *Amycus achromopterus, Karsch.*

Fusco-testaceus, lobis lateralibus pronoti, sternis, pleuris, abdomine pallidis, femoribus posticis apice excepto pallidis, nigro-punctulatis, alis vitrinis, margine antico fusco neenon parte dimidia apicali infuscata. ♂.

Amicus achromopterus. Karsch, 1896, Stett. Ent. Zeit., 250.

Patria. EAST AFRICA: Nyassa, Milanji (Karsch).

The antennæ are more slender than in the preceding species, and also longer; the depressed basal part is not serrated on the outer margin. The wings are plain and not coloured.

NOTE.—Since the above went to the press, I have seen Mr. Kirby's work on a "Collection of Locustidæ, formed by Mr. W. L. Distant in the Transvaal" (ante, p. 57), which will necessitate the modification of some points in this paper. The *Acrida turrita* of Mr. Kirby coincides with my *Acrida nasuta*, whereas his *Tryxalis nasuta* coincides with my *Acrida variabilis*; his *Acrida gigantea*, Fuessly, is the striped form of my *Acrida nasuta*. I have inadvertently omitted *Acrida madecassa*, Brancsik (1893, Jahresb. Ver. Trencsen, xv, p. 186, from Madagascar), which appears to me to differ little, if at all, from *Acrida nasuta*, Linn. The two species *Acrida rendalli*, Kirby, and *Acrida aspersata*, Kirby, do not clash with any described by me.
